A, Wap position: 16p11.2-16p11.2
A, Wate: promoter contains a GATA motif and two Sp1 consensus binding sites
A, Note: promoter contains a GATA motif and two Nilebrand factor type A repeat h
A, Note: promoter contains a graph sequence #status predicted <51G>
C, Superfamily: cell surface glycoprotein CD11b *status experimental <AAT>
F; 1-16 Domain: signal sequence #status predicted <51G>
F; 1-16 Domain: status predicted <51G>
F; 1-108 A Domain: von Willebrand factor type A repeat homology <VWA2>
F; 148-318 A Domain: von Willebrand factor type A repeat homology <VWA2>
F; 539-601/Region: calcium/magnesium binding #status predicted
F; 530-538 A Region: calcium/magnesium binding #status predicted

A Residues: 1-752, L'. 757-1163 <CO3>

A) Residues: 1-755, L'. 757-1163 <CO3>

A) Residues: 1-755, L'. 757-1163 <CO3>

A) Note: part of this sequence was confirmed by protein sequencing

C) Comment: A common beta chain (CD18) forms a heterodimer with CD11b to form Mac-1 on my

A) Gene: GDB:ITGAX; CD11C

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ŏ
```

component precursor

```
A; Description: cleaves complement C3 and complement C5 alpha chains
A; Pathway: complement classical pathway
C; Superfamily: complement C2; complement factor H repeat homology; trypsin homology;
C; Superfamily: complement C2; complement classical pathway; duplication; glycopro
E;1-18/Domain: signal sequence #status predicted <SIG>
F;1-28/Domain: somplement C2b fragment #status predicted <C2B>
F;2-269/Domain: complement factor H repeat homology <FHI>
F;24-149/Domain: complement factor H repeat homology <FHI>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     F.156-210/Domain: Complement factor H repeat homology FH35

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sillingen alpha 1(XIV) chain precursor, short form - chicken
C;Species: Gallus gallus (chicken)
C;Accession: 53121
C;Accession: 53121
Eur. J. Biochem. 212, 483-490, 1993
A;Title: Complete primary structure of chicken collagen XIV.
A;Refleace number: 531211; MUID:9318668
A;Accession: 53122
A;Residues: 1000
A;Status: nucleic acid sequence not shown; translation not shown
A;Molecule type: mRNA
A;Residues: 1-1857 C*MAE;
A;Residues: 1-1857 C*MAE;

C; Function:
A; Description: structural component of extracellular polymer associated with anchorin C; Superfamily: unassigned collagens; animal Kunitz-type proteinase inhibitor homology C; Keywords: collad coll; extracellular matrix; glycoprotein; hydroxylysine; hydroxypr F; 1-16/Domain: signal sequence #status predicted <SIG> F; 17-2944/Product: collagen alpha 1(VII) chain #status predicted <MAT> F; 17-253/Domain: animoterminal nonhelical #status predicted <MAT> F; 17-253/Domain: unimoterminal nonhelical #status predicted <MAT> F; 21-31-316/Domain: thoronectin type III repeat homology <FN1> F; 32-413/Domain: fibronectin type III repeat homology <FN2> F; 508-593/Domain: fibronectin type III repeat homology <FN4> F; 508-593/Domain: fibronectin type III repeat homology <FN5> F; 568-593/Domain: fibronectin type III repeat homology <FN5> F; 568-593/Domain: fibronectin type III repeat homology <FN3> F; 568-593/Domain: fibronectin type III repeat homology <FN3> F; 568-593/Domain: fibronectin type III repeat homology <FN3> F; 568-593/Domain: fibronectin type III repeat homology <FN9> F; 568-593/Domain: fibronectin fi
Complex: type VII collagen is probably a homotrimer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          F;1254-2783/Region: interrupted helical

Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, pociniasis, inflammatory bowel diseases, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodykin's chronic myelogenous leukemia, cancer, liver disease, Hodykin's disease, osteoarthritis, Lyme's disease, cacheria and autoimmune diseases e.g. myasthemia gravis, autoimmune diabetes and systemic diseases e.g. myasthemia gravis, autoimmune diabetes and systemic claps erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in parmacogenomics and for monitoring clinical trials. TANGO plarmacogenomics are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a continuous disorder or disorder or having a continuous disorder or disorder or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; secreted protein; proliferative disorder; cancer; tumour; foetal abnormality; developmental abnormality; haematopoletic disorder; immune system disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis;

AAD05300-AAD05379 represent cDNAs corresponding to 28 human secreted correcting genes, and AAE01436-AAE01513 represent the protein genes, and AAE01436-AAE01513 represent the protein genes, and AAE01436-AAE01513 represent the protein genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing, the genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing, and the protein in a sample or by determining the presence of amount of the new protein in a sample or by determining the presence of amount of the new protein. Specific uses are described for each of the mutations in the new genes. Specific uses are described for each of the mutations in the new genes. Specific uses are described for each of the mutations in the new genes. Specific uses are described for each of the mutations disorders, cancer, tumours, foetal and developmental corrections for treatment of an protein and disorders, diseases of the immune system, altergules, neurological disorders, (e.g., rheumatoid arthritis), inflammation, altergules, neurological disorders, (e.g., rheumatoid as sthma, cardiovascular disorders, angiogenic disorders, kidney disorders, cardiovascular disorders, angiogenic disorders, kidney disorders, cardiovascular disorders, angiogenic disorders, kidney disorders, endocrine disorders, and infections. The proteins can also be used to aid wound contain and epithelial cell proliferation, to prevent skin aging cell contains and epithelial cell proliferation, to prevent skin aging cell contains and pathelial cell proliferation, to prevent skin aging partners, and in chemotaxis, and can be used of contains and entry and in chemotaxis, and can be used to contain the contains and in chemotaxis, and can be used to contain the contains and in chemotaxis, and can be used to contain the contains and in chemotaxis, and can be used to contain the contains and can be used to contain the contains and can be used 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       as a food additive or preservative to modify storage properties.
Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunoassays (ELISA). The present sequence represents a human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid molecules encoding 28 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives
cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; gene therapy; binding partner identification; chromosome 19.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ij

AAD03309-AAD03379 represent cDNAS corresponding to 2.8 numan secreted AAD03309-AAD03379. AAD03379 represent the protein steps end conditions are useful for preventing.

AAE01514-AAE01544 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing.

The genes and their secreted proteins are useful for preventing, the reating or amedical conditions can be diagnosed by determining the mew protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the can include developing products for the diagnosis or treatment of and include developing products for the diagnosis or treatment of anormalities, haematopoletic disorders, diseases of the immune system, anormalities, haematopoletic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., alzheimer's disease, branchestinal disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, prepancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound can be used by their of primary tissues, to regenerate tissues, to identify their cognate ligands or binding pattners, and in chemotrasis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in diagnostic immunosasays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human cereted protein of the invention.
                                                                                                New nucleic acid molecules encoding 28 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the SGO uncleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

the encoded polypeptides (AAM38642-AAM42213) with nootropic,
the encoded polypeptides (AAM38642-AAM42213) with nootropic,
to find the therapy. A composition containing a polypeptide or polynucleotide
containing a polypeptide or polynucleotide
cof the invention may be used to treat diseases of the peripheral nervous
cof the invention may be used to treat diseases of the peripheral nervous
cof the invention may be used to treat diseases of the peripheral nervous
cof localized neuropaths and central nervous system diseases, such as
cof lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
cutilisation of the activity, chemotectic/chemokinetic activity, haemostatic
cof cutilisation of the activity, cancer diagnosis and therapy, drug screening,
and thrombolytic activity, arthritis and inflammation, leukaemias and

                                                  the 5'-end sequence's'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cons. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length AAH13628 and AAH13633 to AAH13622 represent human cDNA sequences; AAH03166 to AAH13628 and AAB95893 represent human amino acid sequences; and AAH13632 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TANGO 266; TANGO 216;; TANGO 261; TANGO 267; cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoietic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain hernlation; latrogenic disease; inflammation; meningitis; Alzhelmer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of

AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO cescribes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO cellular proliferation, modulate cellular proliferation, modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate the proliferation of disorders, such as cancer, and lematopoietic associated diseases and disorders, such as cancer, and hematopoietic associated diseases and disorders, treat bone marrow, blood and hematopoietic associated diseases and disorders, spleen associated standard disorders, spleen associated as standard disorders, spleen associated as standard disorders, preat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral ocdema, hydrocephalus, brain herniations, latrogenic disease, inflammations, hydrocephalus and encephalitis, and treat hepatic disorders.

Correlal and viral meningitis, alsociated solesses, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

Correlation of bone and cartilage cells and correbral cancers, corrested to correct the present sequence does not appear in the specification; it was corrected as a sequence does not appear in the present sequence does not appear in the page of the correct 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          243 GNGFRHARNVDRVLCSFKINDSVTLNEKPFSVEDTYLLCPAPILKEVGMKAALQVSMNDG 302

The specification also describes TANGO 266, TANGO 261, TANGO 262, and Specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular differentiation and/or modulate cellular adhesion, modulate extracellular matrix structuring, factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate the proliferation, differentiation, disorders, such as cancer, modulate the proliferation, differentiation, disorders, such as cancer, modulate the proliferation, differentiation, disorders, such as cancer, modulate to sociated diseases and transformers, such as cancer, modulate the proliferation, differentiation of class and leukocytes, disorders, atelectasis, plumonary congestion or cedema, emphysema, chronic bronchitis, bronchial asthma and bronchietersis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the cardiovascular disorders such as ischemic heart disease, modulate the cardiovascular disorders such as ischemic heart disease, or proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or
                                                                                                             TANGO 266; TANGO 216;; TANGO 261; TANGO 262; TANGO 267; cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; whematopoietic associated disease, atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; inflammation; meningitis; highen respectively alsease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel human and murine secreted proteins designated TANGO 216, 261, 266 and 267 useful as modulating agents of cellular processes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         44..213

                                                                                                                                                                                                                                                                                                                                            Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            01-MAR-1999;
15-JAN-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                 08-SEP-2000,
describes TANGO 266, TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO 261 polypeptides can be used to endulate recillular adhesion. Modulate cellular adhesion. The proteins can be used to medulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, andulate cellular adhesion, modulate cell adhesion in proliferation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoletic associated diseases and disorders, atelectasis, and hematopoletic associated diseases and disorders, spleen associated diseases, modulate renal disorders, intestinal disorders, spleen associated diseases, modulate trenal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral ocedema, hydrocephalus, brain herniations, latrogenic disease, inflammations, bydrocephalus, brain herniations, latrogenic disease, inflammations, better and certificed disease, cerebral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5

describes TANGO 266, TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO 260 callular describes to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to creat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular adhesion, modulate cellular and cellular and cellular and cellular appear in proliferation, modulate cellular interactions, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as isonemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to creat disorders associated with the ovaries, and cerebral ocedma, hydrocephalus, brain herniations, latrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, cerebral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders. note: the present sequence does not appear in the specification; it was

The invention relates to isolated nucleic acid molecules encoding novel human secreted extracellular matrix proteins (SPS). The novel human secreted extracellular matrix proteins (SPS). The polynucleotides and proteins are used to prevent, treat a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. For example, disorders associated with decreased expression of SPS. The SP polynucleotide or a vector expressing them may be administered to treat diseases by gene therapy. Antisense molecules may be administered to down regulate expression of SPS by binding with the cells own genes and preventing their expression. The polynucleotides may be used as DNA probes in diagnostic assays. The SPS may also be used as antigens to produce antibodies and to identify modulators used as antigens to produce antibodies and to identify modulators antagonists and antagonists of the SPS. The anti-(SP) antibodies and antagonists and also be used to down regulate expression and activity of SPS and as diagnostic agents for detecting the presence of SPS in samples. The disorders include for example: immune/autoimmune diseases (e.g. HIV (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis), cancers and hyperproliferative disorders (e.g. melanomas, neoplasms of the breast or liver, Sezary syndrome and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's and Parkinson's diseases and cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acid molecules encoding human secreted extracellular matrix

AAB18458-60 represent murine TANGO 216 proteins. The specification also cerescribes TANGO 266, TANGO 267, and TANGO 267. The TANGO CC collular differentiation and/or modulate cellular proliferation, modulate cellular adhesion. The cellular inferentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Wilebrand factor-associated clisorder, regulate extracellular matrix structuring, cellular adhesion, andulate cell adhesion in proliferative disorders, such as cancer, compulate the proliferation, differentiation, and/or function of cells can be used to treat any von Wilebrand disorders, such as cancer, condulate the proliferation, differentiation, and/or function of cells can hematopoietic associated diseases and disorders, treat bone marrow, blood coll mematopoietic associated diseases and disorders, spleen associated diseases modulate the proliferation, differentiation, differentiation, and/or function of bone and cartilage cells and to freat bone and/or cartilage associated diseases, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to freat bone and/or cartilage associated diseases or disorder. They may also be used to cartilage associated with the ovaries, and cerebral cerebral meningitis, Alzheimer's of sease, inflammations, brain meningitis, Alzheimer's Disease, cerebral context, in the specification, it was context the present sequence does not appear in the specification; it was context diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240 VVRGNGFRHARNVDRVLCSFKINDSVTLNEKPFSVEDTYLLCPAPILKEVGMKAALQVSM 299

Amino acid sequence of a murine TANGO 216 polypeptide.

```
The present sequence represents a murine TANGO 216 polypeptide. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular continuous modulate cellular adhesion, modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or matrix structuring, cellular interactions, modulate extracellular matrix structuring, disorders, such as cancer, modulate extracellular matrix structuring, and/or function of cells that appear in the bone marrow, and leukocytes, cand/or function of cells that appear in the bone marrow, and leukocytes, cand/or function of cells that appear in the bone marrow, and leukocytes, cand/or function of cells that appear in the bone marrow, and leukocytes, cand/or function of cells that appear in the bone marrow, and leukocytes, creat bone marrow, blood and hematopoietic associated diseases and disorders, spleen associated diseases, modulate renal disorders, treat chronic bronchitis, bronchial asthma and bronchiectasis, intestinal chronic bronchitis, bronchial asthma and bronchiectasis, intestinal cardiovascular disorders such as isochemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated with the disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ovaries, cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

describes TANGO 266, TANGO 216 proteins. The specification also describes TANGO 266, TANGO 262, and TANGO 267. The TANGO 260 cellular be used to modulate cellular proliferation, modulate cellular adhesion, modulate cellular adhesion. The proteins can be used to track any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, modulate cell trafficking and/or migration, modulate cellular interactions, modulate the proliferation in proliferative disorders, such as cancer, that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, understron or oedema, emphysema, chronic bronchitis, bronchial asthma and bronchiectasis, intestinal disorders, spleen associated as such as isohemic heart disease, modulate trenal disorders, treat cardiovascular disorders such as isohemic heart disease, modulate the proliferation, differentiation, and or function of bone and cartilage cells and to treat bone and/or modular contine as the control of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, latrogenic disease, inflammations, bacterial and viral meningitis, Alzheimmer's Disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

note: the present sequence does not appear in the specification; it was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  60 NEIYYFVEQLAHKFISPQLRMSFIVFSTRGTTLMKLTEDREQIRQGLEELQKVLPGGDTY 119

contract diseases, rheumatorid arthritis, psoriasis, inflammatory versus-host diseases, rheumatorid arthritis, psoriasis, inflammatory versus-host diseases, rheumatorid arthritis, psoriasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chowel disease, septic shock, ulcerative colitis, crohn's disease, chowel disease, osteoarthritis, Lyme's disease, cachexia and autoimmune diseases, osteoarthritis, Lyme's disease, cachexia and systemic diseases e.g. myasthemia gravis, autoimmune diabetes and systemic diseases e.g. myasthemia gravis, autoimmune diabetes and systemic ransgenic animals and the TANGO polypeptides themselves. Partial cransgenic animals and the TANGO polypeptides themselves. Partial TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in TANGO-128, 140, 197, for diagnostic assays, prognostic assays, forensic biology, for diagnostic assays, prognostic assays, prognostic assays, conspections are suitable for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a methods for treating a subject at risk of a disorder associated with aberrant TANGO expression. A wide range
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TANGO; 128; 140; 197; 212; 213; 224; 239; modulating agent; asthma; graft versus-host diseases; rheumatoid arthritis; psoriasis; inflammatory bowel disease; septic shock; ulcerative colitis; crohn's disease; chronic myelogenous leukemia; cancer; liver disease; hodgkin's disease; sosteoarthritis; Lyme's disease; cachexia; autoimmune disease; myasthemia gravis; autoimmune diabetes; systemic lupus errythematosus; transgenic animal; diagnosis; prophylatic; therapeutic; mouse.
